

MULTIPIPE

Fit from Below "J" Plate

Technical Data Sheet

Product Detail

A reflective pre-grooved aluminium spreader plate was designed to be fixed to the underside structural floor, allowing for 16mm pipework to be clipped into the plate's side to finish this. We recommend a 100mm quilt or 50mm PIR type insulation is laid between the joists to limit losses. Spreader plates dimensions are 1000mm x 165mm with a single groove to allow for variable centres. Spreader plates can be easily trimmed on-site by scoring and snapping.

Benefits

- Lightweight, easy to install
- Can be trimmed easily
- Variable pipe centres
- will not add room height
- Ideal for Engineered joists

Features

- 0.5mm thick aluminium plate for good heat transfer
- Unique J profile holds the pipe tight
- can be easily tacked into place
- ideal for use with 16mm PERT/PEX pipes

Underfloor Heating

Product Code (panel only)	10-16130
Plate Dimension	1000x165mm
Plates per m ² at 200 centres (80% coverage)	4
Pipe Diameter	16mm
Pipe Spacing	Variable
Plate Thickness	0.5mm
